Diabetes and its care have captured the attention of clinicians, managed care, regulatory agencies, and the media. Several successful trials over the past decade have brought the issue of translating evidence-based findings on diabetes care into practice to the forefront of health care discussions (1–3).

Translating Research to Practice | Diabetes Care

Clinicians are overwhelmed with rapidly evolving developments regarding the science and clinical management of diabetes and are struggling to understand and apply new diabetes information. Diabetes: Translating Research into Practice will provide a concise interpretation of translational diabetes research for the purpose of preparing clinicians to understand and effectively deploy new strategies and therapeutics into the clinical care of diabetes patients by examining:

- Diabetes has garnered worldwide attention and research funding as clinicians and researchers seek to better understand its pathogenesis, prevention, complications management, and impact and relationship to other diseases (heart disease, kidney disease, infections, and inflammation).

In conclusion, coordinated and substantial change will be required from all stakeholders in diabetes care research to accelerate translation of research into practice. This not only includes the clinicians and researchers who develop and use interventions, but also

Translating Comparative Effectiveness Research Into Practice: Effects of Interventions on Lifestyle, Medication Adherence, and Self-care for Type 2 Diabetes, Hypertension, and Obesity Among Black, Hispanic, and Asian Residents of Chicago and Houston, 2010 to 2013. Adaptation, adoption, and implementation of HELP and MyRx demonstrated important postintervention changes among racial/ethnic participants in Chicago and Houston.

The NIDDK-supported Centers for Diabetes Translation Research (CDTR) are part of an integrated program whose cores support and enhance diabetes type II translation research (e.g. bedside to practice and the community, dissemination and
Diabetes Translation Research Centers
Addressing this disparity is a major focus of our multipronged translation research program. Newly established Centers for Diabetes Translation Research will serve as a key component of our program to translate efficacious research findings into practice and the community to improve the health of Americans with—or at risk for—diabetes.
