Subsea Production System

A subsea production system (FPS) — which is typically wells located on the sea floor in shallow or deep water — to extract petroleum can be associated with an already existing production platform or an onshore facility.

**Subsea Production System - an overview | ScienceDirect Topics**

Subsea production system consists of subsea completed well, seabed wellhead, subsea production tree, subsea tie-in to flowline system, and subsea equipment and control facilities to operate the well.

**Subsea Production Systems - OffshoreWiki**

For subsea production systems, subsea separation systems can reduce water flow in subsea flowlines. The advantage of applying subsea separation is not only hydrate control, but also increasing recovery of reserves and/or accelerating recovery by making the produced fluid stream lighter and easier to lift.

**Introduction To Subsea Production Systems - Chess Subsea ...**

A subsea production system provides a way to produce hydrocarbons from areas not economically or easily developed by the use of an offshore platform.

**Subsea Production Systems | Atlas Knowledge**

This thesis describes subsea production systems, feasible maintenance strategies and gives an insight in reliability assessment. Based on a literature study a definition of sub-

**Introduction To Subsea Control Systems | Atlas Knowledge**

The worldwide subsea production and processing system market is prognosticated to gain an upper hand with the perpetual drop in onshore petroleum reserves and colossal energy demand. The market growth could be positively influenced by the emerging nations accommodating subsea fields with an elevating count of offshore drilling activities.

**Overview of subsea production systems - LinkedIn SlideShare**

The business intelligence summary of Subsea Production System market is a compilation of the key trends leading the business growth related to the competitive terrain and geographical landscape. Additionally, the study covers the restraints that upset the market growth and throws light on the opportunities and drivers that are anticipated to ...

“Subsea production system” means equipment and structures that are located on or below or buried in the seafloor for the production of oil or gas from, or for the injection of fluids into, a field under an offshore production site, and includes production risers, flow lines and associated production control systems (système de production sous-marin).

**Definition of Subsea Production System - IADC Lexicon**

Subsea production systems range in complexity from a single satellite well with a flow line linked to a fixed platform with floating production storage and off-loading (FPSO) or an onshore installation to several wells on a template or clustered around a manifold and transferring to a fixed or floating facility or directly to an onshore installation.
